

ABSTRACT OF THE DISCLOSURE

An improved structure for a golf club head having been fixed on the back of the striking face with a compression coil in the direction following the striking of the ball with one end of the coil soldered to the center on the back 5 of the face and another end fixed to a press bar, both sides of the press bar being welded to the back of the striking face for the compression coil to hold against and fix to the back of the striking face to sufficiently upgrade its coefficient of resilience, thus the driving distance.
